Professor: Vice Chair.

Did you recently login to Q8PACS Blog ??

Did you notice the FDA IT recall list ??

Today, I have logged in to Q8PACS Blog and; as usual, I was checking FDA IT recall list.

This time I noticed some thing special in the list. This time in that list we had products from all BIG names (*see image on top*)

This observation can bring many lessons to our imaging community. Some of these lessons are:

- **Big names can also make mistakes ..**
Some times their mistakes are as big as their name.

- **PACS recalls: wrong measurement.**

Majority of PACS Recalls are due to wrong measurement by medical software. Those wrong measurement will definitely affect a diagnosis or a treatment plan.

It's time to start QC program for PACS Workstations.

- **PACS is a medical devices ..**

Medical IT software are medical devices that are governed by medical device regulations. If you don't have those regulations.. make them !

- **Majority recalls are class 2.**

Class 2 recalls are due to deficits which can??have potential to cause ?serious injuries.

- **Take the effort and watch recalls.**

Take the effort to improve safety of your patients by watching [FDA recalls](#) [1].
